A L E X D O W S E T T

Project Engineer | Software, Automation & Technical Delivery
London Area, UK | alex@dowsett.dev | dowsett.dev | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Project & Software Engineer fluent in Python and SQL with hands-on experience designing, developing, and delivering customer solutions. Experienced in translating customer and business requirements into technical solutions, designing configurable workflows, automating operational processes, and possess a particular knack for communication cross-functionally and with non-technical stakeholders. Comfortable and confident to take ownership of ambiguous technical problems and work across concurrent delivery projects. Particularly interested in software engineering, automation, AI and technical roles that combine engineering with meaningful stakeholder interaction.

WORK EXPERIENCE

Project Engineer — Content Guru | *September 2025 – Present*

- Design and implement email and webchat solutions, including dynamic conversational flows and business logic deployed across multiple customer environments.
- Work closely with customers to translate their complex requirements into technical solutions while coordinating with stakeholders through ServiceNow to facilitate decisions and manage high-value orders through to delivery.
- Develop internal automation using Python, APIs and databases to streamline provisioning workflows and reduce repetitive operational work.
- Act as the technical owner of a scalable role-based access control model within a complex multi-organisation enterprise environment, including automation for user, role and permission provisioning.
- Troubleshoot and resolve complex technical issues across projects, preparing and executing test plans to ensure successful production delivery and collaborating with customers and other engineering teams.

AI Model Evaluator — Prolific | *October 2024 – August 2025*

- Completed 300+ research and AI evaluation studies, including human-in-the-loop AI training and model evaluation tasks.
- Assessed AI-generated image and coding outputs against structured criteria, providing detailed feedback to support model training and improvement.
- Developed experience in data labelling, instruction-following, quality assessment and systematic evaluation of AI behaviour.

SELECTED ENGINEERING PROJECTS

dowsett.dev — Next.js| React | JavaScript | Web Development

- Designed and built portfolio website, dowsett.dev

Agricultural VOC Data Analytics Platform — Python | SQL | Machine Learning | Data Analysis

- Developed bespoke software to process and analyse millions of data points generated by agricultural VOC sensors.
- Designed data cleaning, normalisation and processing pipelines before applying machine learning techniques to identify patterns associated with animal health.
- Produced a predictive analysis tool capable of assessing changes associated with interventions including diet, temperature and vaccination.
- The resulting software and research foundation continued to be developed within the university by a PhD student following project completion.

Vivant Smart Doorbell — Python | SQL | PHP | AWS | Raspberry Pi | Linux

- Led software development for a Raspberry Pi-based smart doorbell as part of a multidisciplinary engineering team.
- Developed backend functionality using Python, SQL and PHP, including APIs supporting communication with an iOS application.
- Implemented facial recognition and fingerprint authentication alongside a GUI for visitor video communication.
- Managed software tasks across a seven-person team and coordinated integration between hardware and software components.

Hairdresser Booking System — Python | Tkinter | SQL

- Developed a bespoke desktop booking application for a local business.
- Implemented authentication, appointment scheduling and payment-tracking functionality using Python and SQL.

EDUCATION

University of Surrey | 2020 – 2024
BEng Electronic Engineering with Computer Systems
2:1 Second Class Honours
Final Year Project: **Data Analytics Software for Agricultural VOC Analysis**

Mayflower High School and Sixth Form | 2012 – 2019
Highest-performing student in the year in Mathematics and Computer Science at GCSE and A-Level.
A Levels: *Mathematics (A*), Computer Science (A), Physics (B)*
GCSEs: *Mathematics (9), Computer Science (A*), English Literature (7), English Language (4), and six (A*-C).*

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript, C, C++
Web Development: React, Next.js, Node.js, HTML, CSS, Tailwind CSS, Three.js
Backend & Data: REST APIs, database development, data processing, automation, machine learning, object-oriented programming
Cloud & Systems: AWS, Linux, Raspberry Pi, Docker
Tools: Git, ServiceNow, Visual Studio Code, WebStorm, Cursor, Claude Code
Engineering: Solution design, technical investigation, system integration, testing, troubleshooting, requirements analysis, process automation
